Questions & Answers

Do you also have plastic quick-connectors in product portfolio?

Plastic coupling systems are currently not part of CEJN's standard portfolio.
However, we would be happy to exchange information on a required special solution.

Are there also multi couplings available?

A multi coupling for thermal management is so far not in our standard portfolio,
but we can discuss special solutions.

How is the leakage test for the connections performed?

Spillage and air-intrusion is tested according to ISO 16028 and with reference
to ISO 7241. These parameters are reported on our datasheet.

In which ranges lies the leakage rate (helium/air)?

Leakage rates are not applicable for this coupling system, since we are talking about
a fluid coupling for water/glycol.

What options are available for plastic applications at Thermal Management?

CEJN Non Drip and ultraFLOW series are designed for cooling applications only.

Are the couplings also available for Vacuum applications?

CEJN Non Drip and ultraFLOW series are able to handle vacuum.
